

Top 10 Driving Safety Tips

TERMINIX

1

Carry out regular vehicle checks

Complete all safety checks and report any defects immediately to your Line Manager and Fleet department.

2

Don't drive tired

Think ahead and plan extra breaks when driving long journeys.

3

Get your eyesight checked!

You should get your eyesight tested every 2 years or sooner if you suspect a problem. If you need prescription lenses for driving, ensure you wear them every time you drive.

4

Don't use your mobile phone while driving

If you need to use your phone or answer a call, pull over to a safe place before doing so.

5

Don't drive distracted

Loud music and following map aids can affect reaction times. Keep your eyes on the road ahead of you and keep music at reasonable volume.

6

Look ahead and anticipate

Don't just look at what is going on immediately around you, widen your radar to anticipate what is happening ahead of you.

7

Keep your distance

Keep a sensible space around you to decrease the chance of having a collision.

8

Watch out for road markings

Be aware of road markings and signs, as a general rule of thumb, the more signs and road markings the greater the chance of danger.

9

More haste less speed

Stay within the speeding limit and leave plenty time to get to your destination. Speed will not get you to your destination any quicker and it's more important to arrive safely and in one piece!

10

Only a fool breaks the two second rule

Maintain at least 2 seconds-worth of distance between you and the vehicle in front, this should be increased if visibility is reduced or in severe weather conditions.
